Assents to Acts

ACTS OF PARLIAMENT ASSENTED TO

Legislative Assembly Office, Sydney 19 November 2009

IT is hereby notified, for general information, that Her Excellency the Governor has, in the name and on behalf of Her Majesty, this day assented to the undermentioned Acts passed by the Legislative Assembly and Legislative Council of New South Wales in Parliament assembled, viz.:

Act No. 82 2009 – An Act to amend the Commission for Children and Young People Act 1998 and the Criminal Records Act 1991 with respect to the disclosure of information relating to criminal history; and for other purposes. [Commission for Children and Young People Amendment Bill].

Act No. 83 2009 – An Act to amend the Constitution Act 1902 in relation to the appointment of the Chief Justice as the Lieutenant-Governor. [Constitution Amendment (Lieutenant-Governor) Bill].

Act No. 84 2009 – An Act to amend certain Acts in relation to the schemes for funding the New South Wales Fire Brigades, the New South Wales Rural Fire Service and the State Emergency Service. [Emergency Services Legislation Amendment (Finance) Bill].

Act No. 85 2009 – An Act to amend the Food Act 2003 with respect to food safety supervisors; and for other purposes. [Food Amendment (Food Safety Supervisors) Bill].

Act No. 86 2009 – An Act to apply as a law of this State a national law relating to health practitioner regulation. [Health Practitioner Regulation Bill].

Act No. 87 2009 – An Act to amend the Industrial Relations Act 1996 to make further provision with respect to the jurisdiction of the Industrial Relations Commission when constituted by Commissioners; and to amend other related legislation by way of statute law revision. [Industrial Relations Further Amendment (Jurisdiction of Industrial Relations Commission) Bill].

Act No. 88 2009 – An Act to amend the Prevention of Cruelty to Animals Act 1979 to make further provision for the prevention of cruelty to animals. [Prevention of Cruelty to Animals Amendment Bill].

Act No. 89 2009 – An Act to amend the Road Transport (Vehicle Registration) Act 1997 to make further provision in respect of special number-plates. [Road Transport (Vehicle Registration) Amendment (Special Number-Plates) Bill].

Act No. 90 2009 – An Act to amend the State Emergency Service Act 1989 to change the title of the head of the State Emergency Service, to make provision for the handling of tsunamis and to make further provision in relation to the appointment of local and unit controllers; and for other purposes. [State Emergency Service Amendment Bill].

Act No. 91 2009 – An Act to make miscellaneous amendments to certain State revenue legislation. [State Revenue Legislation Further Amendment Bill (No 2)].

RUSSELL D. GROVE, PSM,
Clerk of the Legislative Assembly

NOTIFICATION OF CLOSING OF PUBLIC ROAD

IN pursuance of the provisions of the Roads Act 1993, the road hereunder described is closed and the land comprised therein ceases to be a public road and the rights of passage and access that previously existed in relation to the road are extinguished. On road closing, title to the land comprising the former public road vests in the body specified in the Schedule hereunder.

TONY KELLY, M.L.C.,
Minister for Lands

Description

Administrative District – Hillston North; Shire – Cobar

Road Closed: Lots 1-4, DP 1145492 at Euabalong,
Parishes Booberoi and Guagong, County Blaxland.

File No.: 08/5248.

Schedule

On closing, the land within Lots 1-4 remain vested in the State of New South Wales as Crown Land.

ERRATUM

IN the notification appearing in the *New South Wales Government Gazette* of 20 November 2009, Folio 5729, appearing under the heading "Granting of a Western Lands Lease", the WLL No. of Western Lands Lease 14691 should read "14961".

Department of Planning

**DECLARATION OF CRITICAL INFRASTRUCTURE PROJECTS
UNDER SECTION 75C OF THE
ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979**

I, the Minister for Planning, having formed the opinion that the category of development referred to in Schedule 1 is essential for the State for economic reasons, and for social reasons, and for environmental reasons, declare projects within that category to be critical infrastructure projects under Section 75C of the Environmental Planning and Assessment Act 1979.

Sydney, 11 November 2009.

The Hon KRISTINA KENEALLY, M.P.,
Minister for Planning
Minister for Redfern Waterloo

SCHEDULE 1

Development for the purpose of a facility for the generation of electricity derived from renewable fuel sources (that is, wind energy, solar energy, geothermal energy, hydro energy, wave energy and bio energy), being development that:

- (a) is the subject of an application lodged pursuant to section 75E or section 75M of the Environmental Planning and Assessment Act 1979 lodged after the date of this declaration; and
- (b) is the subject of an application that proposes a development with a capacity to generate at least 30 megawatts.

**DECLARATION OF CRITICAL INFRASTRUCTURE PROJECTS
UNDER SECTION 75C OF THE
ENVIRONMENTAL PLANNING AND ASSESSMENT ACT 1979**

I, the Minister for Planning, having formed the opinion that the projects referred to in Schedule 1 are essential for the State for economic reasons, and for social reasons, and for environmental reasons, declare the projects within Schedule 1 to be critical infrastructure projects under Section 75C of the Environmental Planning and Assessment Act 1979.

Sydney, 11 November 2009.

The Hon KRISTINA KENEALLY, M.P.,
Minister for Planning
Minister for Redfern Waterloo

SCHEDULE 1

The following renewable energy projects, being development for the purpose of wind farms, the subject of a project application lodged pursuant to section 75E or section 75M of the Environmental Planning and Assessment Act 1979:

- (a) Yass Wind Farm (Application Number MP08_0246), and
- (b) Sapphire Wind Farm (Application Number MP09_0093), and
- (c) Flyers Creek Wind Farm (Application Number MP08_0252), and
- (d) Ben Lomond Wind Farm (Application Number MP08_0012), and
- (e) Boco Rock Wind Farm (Application Number MP09_0103).

Department of Water and Energy

WATER ACT 1912

APPLICATIONS for a licence, under the section 10 of Part 2 of the Water Act 1912, as amended, have been received as follows:

Thomas Joseph & Sara Ellen KELLY for a pump on Dignams Creek being Part Lot 5, DP 1116552, Parish Narira, County Dampier for water supply for domestic purposes. New licence. Partly replacing 10SL025957 due to the permanent transfer of 2.0 megalitres. (Exempt from the 2007 South Coast Rivers embargo). Ref: 10SL056878.

Perisher Blue Pty Ltd for 6 pumps on Pipers Creek (aqueduct) on DP 756697, Part Kosciusko National Park, Parish Guthega, County Wallace for water supply for industrial (snow making) purposes. (Water to be extracted directly from the Pipers Creek Aqueduct) (Replacement licence – replacing 10SL056573 due to an increase in pumps – no increase in entitlement) Ref: 10SL056876.

Any inquiries should be directed (02) 4429 4442. Written objections, from any local occupier or statutory authority, specifying grounds and how their interests are affected, must be lodged with the NSW Office of Water, PO Box 309, Nowra NSW 2541, within 28 days of this publication.

WAYNE RYAN,
Licensing Officer

APPLICATIONS under Part 2 within a Proclaimed (declared) Local Area under section 5 (4) of the Water Act 1912. Applications for a licence under section 10 for works within a proclaimed (declared) local area as generally described hereunder have been received from:

Murrumbidgee Valley

Tumut Shire Council for a diversion pipe on Jounama Creek, Kosciusko National Park, Parish Jounama, County Buccleuch and a pontoon mounted emergency pump on Jounama Pondage, Lot 10, DP 850852, Parish Talbingo, County Buccleuch for town water supply to Talgingo Township. Ref: 40SL71183.

Any inquiries should be directed to (02) 6953 0700. Written objections, from any local occupier or statutory authority, specifying grounds and how their interests are affected, must be lodged with the NSW Office of Water, PO Box 156, Leeton NSW 2705, within 28 days of this publication.

S. F. WEBB,
Licensing Manager

WATER ACT 1912

Barwon

AN application for a licence under Part 2 section 10 of the Water Act, 1912 within a proclaimed (declared) local area under section 5(4) has been received as follows:

Namoi River Valley

Peter Leitch for a diversion channel on an unnamed watercourse on Lot 63 DP 753916, Parish Burrendong, County Jamison for water supply for irrigation of 647.5 ha. Ref 90SL050988

Written objections to the application specifying the grounds thereof may be made by any statutory authority or local occupier within the proclaimed area whose interests may be affected and must be lodged with the NSW Office of Water, PO Box 796, Murwillumbah NSW 2484 within 28 days of the date of publication.

North Coast

AN application under Section 10 of Part 2 of the Water Act 1912 has been received as follows:

Bruce Victor Evans and Frances Anne Evans for a 50mm pump on the Richmond River on Lot 3 DP 701764, Parish Wiangaree, County Rous for water supply for irrigation of 3 Ha (10ML) New licence, water entitlement obtained by way of permanent transfer. Ref:30SL067098

Written objections to the application specifying the grounds thereof must be lodged with the NSW Office of Water, PO Box 796, Murwillumbah NSW 2484 within 28 days of the date of publication.

ENERGY AND UTILITIES ADMINISTRATION (ENERGY CONTRIBUTIONS) ORDER 2009

I, The Hon. JOHN ROBERTSON, M.L.C., Minister for Climate Change and Environment, with the concurrence of The Hon. JOHN ROBERTSON, M.L.C., Minister for Energy and The Hon. ERIC ROOZENDAAL, M.L.C., Treasurer, make the following Order under section 34J of the Energy and Utilities Administration Act 1987.

This Order takes effect on the date that it is published in the Gazette.

Dated at Sydney, this 18th day of November 2009.

JOHN ROBERTSON, M.L.C.,
Minister for Climate Change and Environment

Explanatory note

Section 34J of the Energy and Utilities Administration Act 1987 provides that the Minister may, by order published in the Gazette, require any one or more distribution network service providers to make an annual contribution for a specified financial year to the Climate Change Fund. The purpose of this Order is to require defined distribution network service providers to make an annual contribution to the Climate Change Fund for the financial year commencing 1 July 2009.

1. Name of Order

This Order is the Energy and Utilities Administration (Energy Contributions) Order 2009.

2. Commencement

This Order commences on the date that it is published in the Gazette.

3. Interpretation

The Explanatory Note to this Order does not form part of the Order.

4. Definitions

distribution network service provider means a distribution network service provider listed in column 1 of Schedule 1.

5. Annual contribution

(1) A distribution network service provider is required to make an annual contribution to the Climate Change Fund for the financial year commencing 1 July 2009.

(2) The amount of the annual contribution to be paid by a distribution network service provider is as set out in column 2 of Schedule 1.

6. Time for payment

The annual contribution is to be paid in three instalments:

- First instalment on 1 December 2009 equal to half the total annual contribution
- Second instalment on 1 March 2010 equal to one quarter of the total annual contribution
- Third instalment on 1 June 2010 equal to one quarter of the total annual contribution.

SCHEDULE 1

<i>Column 1</i>	<i>Column 2</i>
Distribution network service provider	Annual contribution
EnergyAustralia	\$67,353,873
Integral Energy	\$42,385,378
Country Energy	\$32,989,294

GEOGRAPHICAL NAMES ACT 1966

PURSUANT to the provisions of section 10 of the Geographical Names Act 1966, the Geographical Names Board has this assigned the names listed hereunder as geographical names.

Assigned Name:	Apple Tree Gully
Designation:	Gully
L.G.A.:	Gosford
Parish:	Mangrove
County:	Northumberland

GEOGRAPHICAL NAMES ACT 1966

Notice of Proposal to Amend Address Locality Names
 and Boundaries Within the Mid-Western Regional
 Local Government Area

PURSUANT to the provisions of section 8 of the Geographical Names Act 1966, the Geographical Names Board hereby notifies that it proposes to amend address locality names and boundaries in the Mid-Western Regional Local Government Area as shown on map GNB5019-1-A.

Copies of map GNB5019-1-A may be viewed at Mid-Western Regional Council Offices, 86 Market Street, Mudgee; 109 Herbert Street, Gulgong and 77 Louee Street, Rylstone. Mudgee Library, 64 Market Street; Kandos Library, Angus Avenue and Gulgong Library, 109 Herbert Street from Friday, 27 November 2009 until Monday, 28 December 2009.

A copy of Map GNB5019-1-A will also be on display at the office of the Geographical Names Board, Land and Property Management Authority, 346 Panorama Avenue, Bathurst NSW 2795 during the above dates. This proposal may also be viewed and submissions lodged on the Geographical Names Board website at www.gnb.nsw.gov.au during the above dates.

Any person wishing to make comment upon this proposal may prior to Tuesday, 29 December 2009 write to the Secretary of the Board with that comment. All submissions lodged in accordance with section 9 of the Geographical Names Act 1966 may be subject to a freedom of information application.

WARWICK WATKINS,
 Chairperson

Geographical Names Board
 PO Box 143, Bathurst NSW 2795

HERITAGE ACT 1977

Direction Pursuant to Section 34 (1) (a)
 to List an Item on the State Heritage Register
 Yooroonah Tank Barrier
 SHR No. 1803

IN pursuance of section 34 (1) (a) of the Heritage Act 1977, I, the Minister for Planning, having considered a recommendation of the Heritage Council of New South Wales, direct the Council to list the item of environmental heritage specified in Schedule "A" on the State Heritage Register. This listing shall apply to the curtilage or site of the item, being the land described in Schedule "B". The listing is subject to the exemptions from approval under section 57 (2) of the Heritage Act 1977, described in Schedule "C" and in addition to the standard exemptions.

KRISTINA KENEALLY, M.P.,
 Minister for Planning

Sydney, 28th day of October 2009.

SCHEDULE "A"

The item known as Yooroonah Tank Barrier, situated on the land described in Schedule "B".

SCHEDULE "B"

There is no land description (Lot and DP) for this site.

The curtilage was achieved by plotting the approximate point of the mined explosives tunnel underneath the original road on an aerial photograph and plotting the boundary in a 200m radius from this point.

Parish of Serpentine, County of Clarke shown on the plan catalogued HC 2154 in the office of the Heritage Council of New South Wales.

SCHEDULE "C"

1. Works in accordance with the 'Cathedral Rock National Park – Plan of Management' (NSW National Parks and Wildlife Service, 2002).
2. Routine maintenance of the site to be conducted by DECCW (including periodic hazard burning and weed management activities).
3. RTA routine maintenance of the section of Waterfall Way that traverses the SHR-listed curtilage.
4. Periodic access by stock to the Travelling Stock Route area.

HERITAGE ACT 1977

Direction Pursuant to Section 34 (1) (a)
 to List an Item on the State Heritage Register
 Simpson-Lee House 1, 23 Roland Avenue, Wahroonga
 SHR No. 1800

IN pursuance of section 34 (1) (a) of the Heritage Act 1977, I, the Minister for Planning, having considered a recommendation of the Heritage Council of New South Wales, direct the Council to list the item of environmental heritage specified in Schedule "A" on the State Heritage Register. This listing shall apply to the curtilage or site of the item, being the land described in Schedule "B".

KRISTINA KENEALLY, M.P.,
 Minister for Planning

Sydney, 28th day of October 2009.

SCHEDULE "A"

The item known as Simpson-Lee House 1, situated on the land described in Schedule "B".

SCHEDULE "B"

All those pieces or parcels of land known as Lot B, DP397638 in the Parish of South Colah, County of Cumberland shown on the plan catalogued HC 2240 in the office of the Heritage Council of New South Wales.

HERITAGE ACT 1977

Direction Pursuant to Section 34 (1) (a)
to List an Item on the State Heritage Register

Earlwood Aboriginal Art Site

SHR No. 1801

IN pursuance of section 34 (1) (a) of the Heritage Act 1977, I, the Minister for Planning, having considered a recommendation of the Heritage Council of New South Wales, direct the Council to list the item of environmental heritage specified in Schedule "A" on the State Heritage Register. This listing shall apply to the curtilage or site of the item, being the land described in Schedule "B".

KRISTINA KENEALLY, M.P.,
Minister for Planning

Sydney, 11th day of November 2009.

SCHEDULE "A"

The item known as Earlwood Aboriginal Art Site, situated on the land described in Schedule "B".

SCHEDULE "B"

All those pieces or parcels of land known as Part Lot 38, DP 4709 in Parish of St Goerge, County of Cumberland shown on the plan catalogued HC 2292 in the office of the Heritage Council of New South Wales.

HERITAGE ACT 1977

Direction Pursuant to Section 34 (1) (a)
to List an Item on the State Heritage Register

Ferguson's Cottage

SHR No. 1802

IN pursuance of section 34 (1) (a) of the Heritage Act 1977, I, the Minister for Planning, having considered a recommendation of the Heritage Council of New South Wales, direct the Council to list the item of environmental heritage specified in Schedule "A" on the State Heritage Register. This listing shall apply to the curtilage or site of the item, being the land described in Schedule "B".

KRISTINA KENEALLY, M.P.,
Minister for Planning

Sydney, 11th day of November 2009.

SCHEDULE "A"

The item known as Ferguson's Cottage, situated on the land described in Schedule "B".

SCHEDULE "B"

All those pieces or parcels of land known as Part Lot 21, DP 850150 in Parish of Coff, County of Fitzroy shown on the plan catalogued HC 2090 in the office of the Heritage Council of New South Wales.

**HOME BUSH MOTOR RACING (SYDNEY 400)
ACT 2008**

Order to Declare Prohibition of Certain Advertising on Buildings and Structures under the Homebush Motor Racing (Sydney 400) Act 2008

I, the Minister for State Development, in pursuance of section 37 (1) of the Homebush Motor Racing (Sydney 400) Act 2008 (the Act) and having sought and obtained the advice of the Homebush Motor Racing Authority, do, by this Order declare the area hatched in red and bounded by the outside of the red line in Schedule 1, to be an advertising controlled site at Sydney Olympic Park under the provisions of section 37 of the Act for the period 3 December – 7 December 2009, inclusive.

Dated this 24th day of November 2009.

ERIC ROOZENDAAL, M.L.C.,
Minister for State Development

**HOME BUSH MOTOR RACING (SYDNEY 400)
ACT 2008**

Homebush Motor Racing Authority

Notification of Official Insignia

In pursuance of section 35 (3) of the Homebush Motor Racing (Sydney 400) Act 2008, notice is hereby given that the approved Official Insignia design of the annual Homebush V8 motor race event is:

Dated this 24th day of November 2009.

ERIC ROOZENDAAL, M.L.C.,
Minister for State Development

HOUSING ACT 2001

Notification of Compulsory Acquisition of Land

NEW SOUTH WALES LAND AND HOUSING CORPORATION declares, with the approval of Her Excellency the Governor, that the land described in the Schedule below is acquired by compulsory process under the provisions of the Land Acquisition (Just Terms Compensation) Act 1991 for the purposes of the Housing Act 2001.

Dated this 24th day of November 2009.

MIKE ALLEN,
Chief Executive

SCHEDULE

The land shown as Lot 1 on the plan of land at Whalan, in the Local Government Area of Blacktown, Parish of Rooty Hill, County of Cumberland, registered at Land and Property Information NSW as Deposited Plan No. 1116633.

LOCAL GOVERNMENT ACT 1993

Delay of By-Election, Central Darling Shire Council

I, the Hon. Barbara Perry, M.P., Minister for Local Government, in pursuance of section 293 of the Local Government Act 1993, have formed the opinion that it would be impractical or inconvenient to hold a by-election for Central Darling Shire Council by 20 January 2010 as a consequence of a casual vacancy in civic office that was held by Councillor Garry Astill and order that Saturday 13 February 2010 be appointed as the day for that by-election instead.

Dated this 18th day of November 2009.

BARBARA PERRY, M.P.,
Minister for Local Government

LOCAL GOVERNMENT ACT 1993

Delay of By-Election, Gundagai Shire Council

I, the Hon. Barbara Perry, M.P., Minister for Local Government, in pursuance of section 293 of the Local Government Act 1993, have formed the opinion that it would be impractical or inconvenient to hold a by-election for Gundagai Shire Council by 31 January 2010 as a consequence of a casual vacancy in civic office that was held by Councillor Ron Smith and order that Saturday 13 February 2010 be appointed as the day for that by-election instead.

Dated this 18th day of November 2009.

BARBARA PERRY, M.P.,
Minister for Local Government

Office of the Minister for Police,
Sydney

MANSLAUGHTER

ONE HUNDRED THOUSAND DOLLARS (\$100,000)
REWARD

ON the 19th October 2002 Ronald GILLETT died as a result of smoke inhalation and incineration following a deliberately lit fire near Haulage Road, Cessnock.

Notice is hereby given that a reward of up to one hundred thousand dollars (\$100,000) will be paid by the Government of New South Wales for information leading to the arrest and conviction of the person or persons responsible for the lighting of the fire and subsequent death of Mr GILLETT.

The allocation of this reward will be at the sole discretion of the Commissioner of Police.

The urgent assistance and co-operation of the public is especially sought in the matter. Any information, which will be treated as strictly confidential, may be given at any time of the day or night at any Police Station or by telephone –

1. Introduction

1.1 Purpose of this document

This document has three functions:

1. To specify the mandatory requirements additional to those set out in the Protection of the Environment Operations (Clean Air) Regulation 2002 (the Regulation) for vapour recovery at petrol service stations. These mandatory requirements are set out in section 5 of this document.
2. To provide best practice guidelines for maximising vapour recovery.
3. To provide within one document a summary of all mandatory requirements and best practice guidelines to help those responsible for the operational management of petrol service stations comply with the Regulation.

Compliance with these Standards and Best Practice Guidelines for Vapour Recovery at Petrol Service Stations ('these Standards and Guidelines') and the vapour recovery provisions of the Regulation will not ensure other regulatory requirements are met, such as the Protection of the Environment Operations (Underground Petroleum Storage Systems) Regulation 2008. Those responsible for the operational management of petrol service stations should be aware of these other obligations.

1.2 Background

The refilling of underground petrol storage tanks and the filling of vehicle fuel tanks lead to the displacement of petrol vapour equal in volume to that of the fuel being transferred. This vapour is released into the atmosphere unless otherwise captured. It contains benzene, xylene, toluene and other volatile organic compounds (VOCs) which contribute to local, regional and global air pollution.

In late 2009, the Protection of the Environment Operations (Clean Air) Amendment (Vapour Recovery) Regulation 2009 made substantial changes to Section 5 of the Protection of the Environment Operations (Clean Air) Regulation 2002 (the Regulation).

The amended Regulation prescribes specific controls to minimise the emission of VOCs from petrol service stations.

1.3 Structure of this document

This document is structured as follows:

- sections 1 and 2 of this document cover interpretation and definitions
- section 3 introduces the general principles of vapour recovery at petrol service stations
- section 4 gives an overview of the regulatory requirements for vapour recovery at petrol service stations
- section 5 sets out the additional **mandatory requirements** required by the Regulation to be set out in this document
- section 6 sets out best practice guidelines for the design and operation of vapour recovery systems.

2. Interpretation and definitions

Where the Regulation and these Standards and Guidelines differ on any point, the Regulation prevails. Terms used in these Standards and Guidelines have the same meaning as set out in the Regulation, unless otherwise stated.

3. General principles of vapour recovery at petrol service stations

This section presents a general overview of the principles of vapour recovery at petrol service stations.

3.1 Stage 1 vapour recovery

Stage 1 vapour recovery (VR1) at petrol service stations limits the emissions of volatile organic compounds (VOCs) that result from unloading petrol from a road tanker into petrol service station storage tanks.

When petrol is transferred from a delivery tanker to an underground storage tank, a slight pressure build-up occurs in the underground storage tank, which displaces vapour. VR1 systems return displaced vapour back to the delivery tanker by means of a vapour-tight connection line. A simple VR1 system is shown in Figure 1.

To minimise vapour loss from the underground storage tank through the vent during filling, the vent pipes are fitted with a 10-millimetre orifice. A pressure vacuum relief valve (PV valve) is fitted in parallel, to prevent hazardous pressures or vacuums building up. The PV valve should remain closed except under adverse conditions.

Figure 1: Stage 1 vapour recovery

3.2 Stage 2 vapour recovery

When vehicles are refuelled at petrol service stations, the vapour in the vehicle fuel tanks is displaced by the fuel. Stage 2 vapour recovery (VR2) equipment is designed to capture the displaced vapour and return it to the underground fuel storage tank or other appropriate vessel.

Usually, the fuel dispenser hose contains both fuel and vapour return lines. The vapour is drawn through the vapour return line by a vacuum pump. VR2 systems are intended to limit the emissions of fuel vapour when vehicles refuel by recovering at least 85% of the displaced vapour. Figure 2 shows the principles of operation of VR2.

Vapour recovery equipment needs to be properly maintained so it is vapour-tight and operates as specified by the manufacturer. VR2 systems need to be tested regularly. System testing includes monitoring the effectiveness of vapour recovery at the dispenser and the vapour containment in the underground storage tank, pipe work and fittings.

Figure 2: Stage 2 vapour recovery

4. Overview of the Regulation

This section summarises the vapour recovery provisions of the Protection of the Environment Operations (Clean Air) Regulation (the Regulation) as inserted by the amendment Regulation in 2009. This is a summary only, so refer to the Regulation to assess individual legal obligations. The Regulation provides for a range of prescribed control equipment and techniques to reduce the emission of petrol vapour from the following activities at petrol service stations:

- the unloading of petrol from road tankers into underground storage tanks
- the storage of petrol
- the dispensing of petrol into vehicle petrol tanks.

The requirement to fit vapour recovery equipment depends on petrol throughput (the quantity of petrol dispensed per annum). If the petrol service station throughput subsequently falls, continued operation of the vapour recovery systems is required.

4.1 VR1 requirements

Some Stage 1 vapour recovery controls have been progressively introduced from 1986 in Sydney (the inner red shaded region in Figure 3 on the next page). Since the 2009 amendments to the Regulation, existing and new or newly modified petrol service stations in the Sydney, Central Coast, Illawarra and Lower Hunter regions (blue and brown regions in Figure 3) are required to progressively introduce more stringent VR1 controls, based on throughput thresholds and the local government area in which they are situated. The prescribed equipment is designed to achieve a capture efficiency of 97% of petrol vapour. Appendix 3 contains a comprehensive listing of prescribed control equipment for VR1.

In the expanded VR1 area:

- from 1 July 2010, new and modified petrol service stations that dispense more than 0.5 million litres of petrol per year are required to fit and operate the VR1 prescribed control equipment
- from 1 January 2014, all petrol service stations that dispense more than 0.5 million litres of petrol per year must fit and operate VR1 prescribed control equipment.

Petrol service stations that were required to have vapour recovery equipment in compliance with clause 52 of the Regulation, prior to the amendments in 2009, must continue to comply with the obligations under clause 52 until they fit and commission the new VR1 control equipment prescribed under clause 54A(1).

Stage 1 vapour recovery systems must return displaced vapour to the delivery tanker via a vapour return line or to a vapour processing unit. The Regulation requires each underground storage tank to have:

- **vapour return lines/a transfer system** that returns all vapour displaced from the storage tank to the delivery tanker or vapour processor
- **vapour tight couplings on the vapour line** that close automatically when disconnected
- **liquid tight couplings** on the liquid transfer hoses
- **incompatible liquid and vapour couplings**
- **spill containment** enclosures for the storage tank fill connection point
- **secure seals** on tank filling pipes and vapour return pipes that minimise vapour leaks when the pipes are not in use

- **submerged fill pipes**, so they terminate below the suction inlet used for the pumping of petrol out of the storage tank
- **overflow protection devices** (float vent valves) fitted to shut off the petrol flow at the level advised by the tank manufacturer
- for new petrol service stations, **overflow prevention devices** (mechanical, electrical or electronic) that slow delivery of petrol into the storage tank as the level in the storage tank approaches the design fill level – the devices should be positioned to stop the petrol flow before the float vent valve operates
- **secure seals** on any dip hatch openings
- a **pressure vacuum valve and a 10-millimetre orifice** in parallel fitted to the storage tank vent pipe. Similar devices are permitted, but will only be accepted by the EPA where they are shown by an independent certifier to perform the same duty.

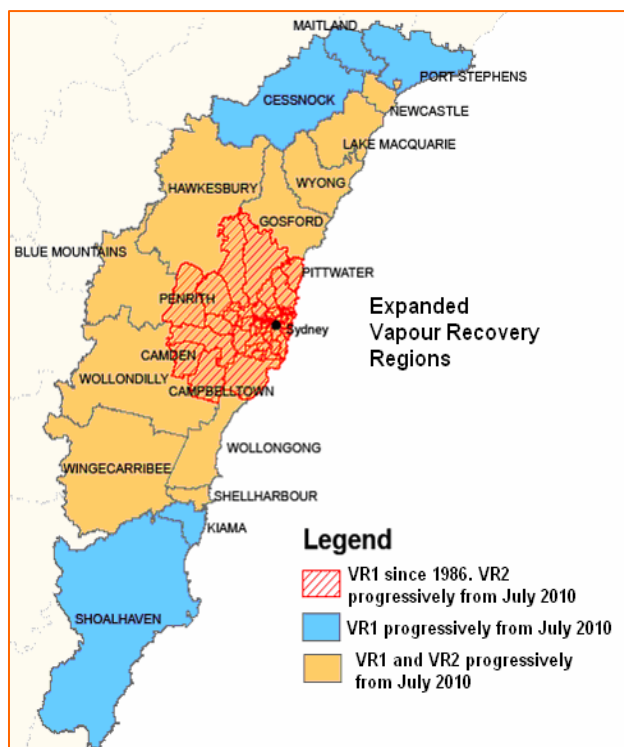

Figure 3: Regions in which vapour recovery is required

A vapour processing unit may also be fitted but it must be certified as meeting the hydrocarbon capture efficiency criteria specified in section 5 of these Standards and Guidelines.

The Regulation also requires that the covers on all access points to storage tanks must be kept closed whenever they are not in use.

Petrol vapour return lines should not be connected to diesel or other non-petrol storage tanks. If vapour recovery systems are connected to an E85 installation – the term ‘E85’ means a blend of ethanol and petroleum with the ethanol comprising around 85% – or ethanol rich fuel where the ethanol component is greater than 50%, consideration should be given to the safety risks involved, as advised in section 6.3. Until the risks have been further studied, ethanol rich fuel tanks should not be connected to VR2 systems.

Before VR1 prescribed control equipment is fitted, the tank must be tested for liquid leaks. After installation, the VR1 system must be tested for vapour leaks (vapour containment

testing). The VR1 system must be retested for vapour containment whenever components required to ensure vapour containment integrity are opened for repairs or modifications. See section 5 of these Standards and Guidelines for details.

VR1 systems need to be regularly inspected to avoid vapour return pipes, fittings or vents becoming blocked. They must be tested for vapour containment every three years and the orifice and pressure vacuum valve must be inspected every year.

Use of **automatic pressure monitoring is highly recommended** as the yearly inspection of the orifice and pressure vacuum valve and the three-yearly test for vapour containment are not required where such automatic monitoring is used.

4.2 VR2 requirements

Stage 2 vapour recovery (VR2) controls will be required progressively from July 2010 for petrol service stations in the Sydney, Newcastle, Wollongong and Central Coast metropolitan areas (VR2 area – the brown areas in Figure 3). These controls must recover at least 85% of the displaced vapour when vehicles refuel.

In the VR2 area:

- from 1 July 2010, new and newly modified petrol service stations supplying more than 0.5 million litres of petrol per year are required to have the VR2 prescribed control equipment fitted and operating
- from 1 January 2014, the remaining petrol service stations supplying more than 12 million litres of petrol per year must have VR2 controls fitted and operating
- from 1 January 2017, the remaining petrol service stations supplying more than 3.5 million litres of petrol per year in the Sydney Metropolitan Area – B (as defined in the Regulation) must have VR2 controls fitted and operating.

The VR2 prescribed control equipment is required to capture 85% or more of displaced vapour. The most common means of achieving this is to ensure that the fuel dispensing nozzle and hose incorporate a vapour return line connected to a vacuum. The volume of air recovered can then be controlled either by using a proportional valve or a variable speed vacuum pump. The vapour rich air can then be returned to the petrol storage tank. Section 6.2 provides more details on typical VR2 systems. Appendix 3 contains a comprehensive listing of prescribed control equipment for VR2.

Petrol service stations with an annual throughput of more than 7 million litres must install an automatic monitoring system to monitor vapour system recovery performance. The automatic monitoring system must monitor for recovery performance faults and also look for faults in its own function. It must post warnings when faults are detected and shut down the dispenser(s) if the fault is not fixed after 7 days.

Petrol service stations with less than 7 million litres throughput may use manual or automatic monitoring. Those with throughputs of less than 3.5 million litres are not required to install VR2 prescribed control equipment unless they are newly installed or modified, and must then monitor the system using either manual or automatic monitoring.

The VR2 system must be tested for vapour system recovery performance before commissioning, and whenever components required to ensure the integrity of the system are removed and replaced, for example, during maintenance.

Since VR2 upgrades are likely to occur in conjunction with VR1 upgrades, the VR1 tests are then also required as part of the process. Sections 5.3 and 5.4 of these Standards and Guidelines set out the testing requirements in detail.

Periodic testing requirements depend on the means of monitoring the vapour system recovery performance. Systems that are automatically monitored for vapour system recovery performance need only have the vapour recovered to petrol dispensed ratio (V/L

ratio) tested every three years. The V/L ratio is the ratio of volume of petrol vapour recovered measured against the volume of liquid petrol dispensed, calculated over the duration of the filling operation.

Where manual monitoring is used, weekly system checks are required and vapour system recovery performance must be tested every six months.

Note: Automatic monitoring systems for vapour system recovery performance must detect the following faults, as specified in the Regulation:

- a fault exists when the V/L ratios are less than or equal to 85% or more than 115% for at least 10 consecutive filling operations, where the V/L ratio is averaged over at least 20 seconds during which the minimum rate of petrol dispensed is at least 25 litres per minute
- a fault exists in the automatic monitoring system if a fault in the V/L ratio would not be detected.

Records of the date and type of fault of the last one hundred faults and the last one year's operational data must be retained in the monitoring system and must be easily accessible to operators or inspectors.

4.3 Record keeping and reporting

Record keeping

A log book must be kept that stores any relevant information relating to the prescribed control equipment. Examples are equipment certificates, test results, details of repairs and maintenance and descriptions of incidents involving faults/malfunctions of the vapour recovery system. If manual monitoring is used, the weekly results must also be recorded.

The Regulation requires the following items to be stored in the log book:

- the name, address and contact details of the person with overall responsibility for the petrol service station vapour recovery system
- a description of the installed prescribed control equipment, including types, serial numbers (if any) and the manufacturer's or supplier's equipment certificates
- the name and address of the person with overall responsibility for installation and commissioning of the vapour recovery system
- a description of the testing of the operation of the prescribed control equipment including the type of test, all test results and the name and address of the person with overall responsibility for carrying out the test
- details of repairs and maintenance including the name and address of the repairer
- weekly check results for manual monitoring
- a description of any incidents involving faults with or malfunction of the vapour recovery system and the measures taken to investigate and respond to the fault
- the date of the last report to the EPA.

Details of anything done before commencement of the amendments to the Regulation do not need to be recorded. Records need to be kept for three years by the responsible person, even if the petrol service station is decommissioned.

If the petrol service station has a log book for the purposes of other legislative obligations, that same log book can and should be used for vapour recovery records as well. If the records are kept off-site, an on-site record of the location of the log book and the name(s) and contact details of the person(s) responsible are required.

Reporting

Reporting is required within one month of commissioning new or modified vapour recovery systems on the form provided in Appendix 1.

Annual reporting, within one month of the end of the financial year (by 31 July), is then required **only if there have been significant failures** of the vapour recovery system in the preceding twelve months. The information submitted to the EPA will be used to assess the cost and effectiveness of the vapour recovery requirements, assist in determining level of compliance and inform any adjustments to improve operability or limit costs of vapour recovery.

Note: 'significant failures' specified in the Regulation (clause 54G) are:

- failure of the vapour containment system that require opening of the forecourt for repairs
- any results of tests of the vapour system recovery performance of a manually monitored petrol dispenser and prescribed control equipment that show vapour system recovery has fallen below 85%
- repeated warnings generated by automatic monitoring systems – more than two warnings is considered a significant failure.

Signage

Each petrol dispenser that is fitted with VR2 control equipment must display a sign stating VR2 equipment is present. If every petrol dispenser is fitted, a sign indicating that vapour recovery equipment is in use must also be attached to the petrol service station premises.

4.4 Enforcement

Note that the EPA may use the following procedures to investigate compliance:

- random inspections of petrol service stations
- random inspections of log books
- inspection and audit of petrol service stations based on the profiling of EPA records and other sources of information and data.

5. Requirements for the purposes of obligations under the Regulation

The Regulation contains a series of references to requirements specified in the Standards and Guidelines. This section sets out these requirements. Where the Regulation requires that the specification is set out in these Standards and Guidelines, the Regulation clause number is quoted and prefaced by the words 'for the purposes of'. These requirements are mandatory.

This section should be read in conjunction with the Regulation. In the event of any inconsistency between the two, the Regulation will always prevail. Note that the instructions set out here are **mandatory** and **enforceable**.

5.1 Stage 1 vapour recovery prescribed control equipment

5.1.1 For the purposes of subclause 54A(2)(d)(ii), if the overfill prevention device is electrically powered or contains electronic components, it must meet the following standards:

- it must be constructed in accordance with relevant safety and electrical standards
- it must be installed in accordance with relevant safety and electrical standards.

5.1.2 For the purposes of subclause 54A(2)(k):

- where a device similar to a 10-millimetre orifice is used in the vent line, it must have certification from a testing authority accepted by the EPA that it retains 97% of vapour in the proposed system

- where a device similar to a pressure vacuum valve is used, it must have settings that can:
 - provide emergency relief of excessive pressure or vacuum
 - vent sufficient volume flow rate to prevent exceedences of maximum tank design pressure/vacuum under adverse conditions
 - provide a seal against leakage when the device is in the closed position with the same performance as that in the CARB TP201.1E leak test.

The device must be certified by a testing authority accepted by the EPA.

Note that subclause 54A(2)(k) also requires that the device:

- is of a size and type, and possesses the safety features, that a duly qualified person has advised is suitable
- is installed in accordance with the advice of a duly qualified person.

Note: A 'duly qualified person' means a person who has such competence and experience in relation to the activity as is recognised in the relevant industry as appropriate to carry out that activity.

5.1.3 For the purposes of subclause 54A(2)(k)(i), the pressure vacuum valve (or similar device) settings criteria are:

- the device must be sized and weighted to allow an emergency release of vapours at not more than 80% of maximum tank design pressure
- the device must be of a type that conforms with any applicable standards published by Standards Australia, European Standards or United States Underwriters Laboratories (UL) and have certification by UL or the German TÜV or meet the criteria established in California Air Resources Board Certification Procedure CP201 of May 25 2006, section 3.5
- in the case of a device installed at a new petrol service station, the device must be set to be closed when the pressure in the storage tank is between 1 kilopascal above, and 2 kilopascals below, ambient pressure.

5.1.4 For the purposes of subclause 54A(2)(l), the vapour processing unit must, before commissioning, be certified by the manufacturer or supplier as having a hydrocarbon capture efficiency of at least 97% and being a vapour processing unit certified by:

- the German TÜV, in accordance with the provisions of the Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSch V, section 3(6) [2002] (see Appendix 2), or
- the California Air Resources Board (CARB) as meeting the criteria established in Certification Procedure CP-201 and conforming to Vapor Recovery Test Procedure TP-201.2 (see Appendix 2).

5.2 Stage 2 vapour recovery prescribed control equipment

5.2.1 For the purposes of subclause 54D(2)(a), before commissioning, the vapour recovery system must be certified by the manufacturer or the supplier as being of the following type and hydrocarbon capture efficiency:

- Type: a stage 2 vapour recovery system approved by the German TÜV with a visual indicator that the vacuum operates when fuel is dispensed. The approval must be in accordance with the provisions of Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSchV (section 3, paragraph 6) [2002] (see Appendix 2), and

- Hydrocarbon capture efficiency: a hydrocarbon capture efficiency of not less than 85% vapour recovery to liquid dispensed by volume as measured using a test for active vapour recovery systems in Verein Deutscher Ingenieure (VDI) specification 4205 (see Appendix 2).

The certification obtained must certify that the VR2 system achieves at least 85% vapour recovery and must specify the test used.

5.2.2 For the purposes of subclause 54F(1)(e), the automatic monitoring system for vapour system recovery performance must be certified in the following manner:

- certification by the German TÜV in accordance with the provisions of Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSch V (section 3, clause 5) [2002] with the exception that the number of days until the automatic system shuts off the flow is to be seven days. The test procedure for demonstrating the correct function of the automatic monitoring system is an automatic monitoring test in VDI specification 4205 (see Appendix 2).
- certification by an alternative testing authority may be accepted, in writing, by the EPA. Before certification by that authority is accepted by the EPA, the equipment manufacturer must supply sufficient evidence to demonstrate that the authority has similar competence and accreditations as the TÜV.

5.3 Stage 1 vapour recovery testing

Definitions used in testing requirements

A 'new' storage tank is one that has not previously been used to store fuel and has been newly installed and connected to vapour recovery equipment following the introduction of this regulatory amendment.

An 'existing' or 'modified' underground storage tank is a storage tank that was used to store petrol in a petrol service station before the introduction of this regulatory amendment and is subsequently modified to include a vapour recovery system.

Before installing new Stage 1 vapour recovery equipment

5.3.1 For the purposes of clause 54A(3), before any control equipment is fitted to an underground storage tank, it must be tested in the following manner:

- it must be certified as being leak free in accordance with the provisions for equipment integrity testing specified in AS-4897: 2008, section 8.5 or a test procedure that is certified as being capable of detecting any leak in the liquid space of the underground petroleum storage system as defined in the NSW Protection of the Environment Operations (Underground Petroleum Storage Systems) Regulation 2008, clause 14(1). If the tank has been certified to be leak free in the last three years, that leak free certification is deemed to satisfy this provision.

Before commissioning new Stage 1 vapour recovery equipment

5.3.2 For the purposes of clause 54A(4), a storage tank that has been fitted with the prescribed VR1 control equipment must be tested for vapour containment integrity in the following manner before the equipment is commissioned:

Either:

- in accordance with CARB Vapor Recovery Test Procedure 201.3 (TP-201.3), in the case of new storage tanks, with the orifice isolated or blocked, or Test Procedure 201.3A (TP-201.3A) in the case of existing or modified storage tanks, with the orifice isolated or blocked; or

- using a test on the dry portion of the tank and lines capable of detecting a gas leak equivalent to 0.38 litres per hour with a probability of detection of at least 95% and of false detection of 5% or less, in accordance with AS 4897–2008.

Periodic testing of Stage 1 vapour recovery equipment

5.3.3 For the purposes of clause 54C(1), the prescribed control equipment and the petrol storage tank to which it is fitted must be tested in the following manner and at the times specified:

Test	Timing
The vapour containment integrity of the underground storage tank, fittings and lines must be tested in one of the ways specified in section 5.3.2.	Vapour containment testing must be undertaken: <ul style="list-style-type: none"> • following the removal or replacement of any of the components required to ensure the integrity of the containment system, and • at least once every three years if the station does not have an automatic pressure monitoring system certified by the German TÜV.*
An inspection of orifice plates and pressure vacuum valves for extraneous matter, correct sealing and the presence of corrosion.	Must be conducted at least once a year if the petrol service station does not have an automatic pressure monitoring system certified by the German TÜV.*
Pressure vacuum valves must be checked for correct functioning in accordance with CARB Vapor Recovery Test Procedure 201.1E (TP-201.1E) or equivalent procedure specified by the EPA (see Appendix 2).	Must be undertaken at least once every three years if the petrol service station does not have an automatic pressure monitoring system certified by the German TÜV.*
* Note: where a properly functioning automatic pressure monitoring system, certified by the German TÜV, is installed and is fully operational during any filling of the underground storage tank, operators are not required to undertake any of the tests marked with an asterisk above.	

5.3.4 For the purposes of clause 54C(2), the prescribed control equipment must pass the most recent tests undertaken as specified in sections 5.3.1, 5.3.2 or 5.3.3.

5.4 Stage 2 vapour recovery testing

Testing requirements before commissioning

5.4.1 For the purposes of subclause 54D(2)(c), the Stage 2 vapour recovery system must be tested in the following manner before commissioning:

- test the Stage 2 vapour system recovery performance with a test which meets VDI specification 4205: Part 2 – Wet method or Part 3 – Dry method, or equivalent vapour system recovery performance test specified (see Appendix 4), and

- test the VR1 system for vapour containment integrity in accordance with section 5.3.2.

Testing requirements following the removal or replacement of components required to ensure the integrity of the VR2 system

5.4.2 For the purposes of clause 54E(1), the prescribed control equipment must be tested in the following manner and at the following times:

Test	Timing
Test the Stage 2 vapour system recovery performance with a test which meets VDI specification 4205: Part 2 – Wet method or Part 3 – Dry method, or equivalent vapour system recovery performance test specified (see Appendix 4).	Testing is required immediately after the removal or replacement of any of the components required to ensure the integrity of the vapour recovery system.

5.4.3 For the purposes of clause 54E(2), the most recent vapour system recovery performance test result from sections 5.4.1 or 5.4.2 must demonstrate that the vapour recovery to liquid dispensed ratio was between 95% and 105% inclusive (see Appendix 2).

Periodic testing requirements for manually monitored VR2 systems

5.4.4 For the purposes of clause 54E(1), the prescribed control equipment for a manually monitored system must be tested for vapour containment integrity and vapour system recovery performance in the following manner and at the following times:

Test	Timing
Test the VR2 system recovery performance with a test which meets VDI specification 4205: Part 2 – Wet method or Part 3 – Dry method or equivalent vapour system recovery performance test specified in Appendix 4.	Testing is required every 6 months, in the absence of a properly functioning automatic control system.
Test the vapour containment integrity of the underground storage tank, fittings and lines in the following manner: Either: <ul style="list-style-type: none"> • in accordance with CARB Vapor Recovery Test Procedure 201.3 (TP-201.3) in the case of new storage tanks, with the orifice isolated or blocked, or Test Procedure 201.3A (TP-201.3A) in the case of existing or modified storage tanks, with the orifice isolated or blocked, or • using a test on the dry portion of the tank and lines capable of detecting a gas leak equivalent to 0.38 litres per hour with a probability of detection of at least 95% and of false detection of 5% or less, in accordance with AS 4897–2008. 	Every three years.

5.4.5 For the purposes of clause 54E(2) a petrol dispenser must not be operated unless the most recent test result met the following standard:

- the vapour system recovery performance test found that the V/L ratio was between 95% and 105% inclusive (see Appendix 2)
- the vapour containment test result was a pass.

5.4.6 For the purposes of subclause 54F(2)(a), the weekly testing of the prescribed control equipment for manually monitored systems must be undertaken in the following manner:

- check the visual indicator on the vacuum during a dispensing operation to ensure the vacuum is functioning
- inspect for torn, flattened or kinked hoses and damaged seals on vapour recovery return hoses and lines
- enter the checks and findings in the petrol service station log book.

5.4.7 For the purposes of clause 54F(4), the test of functionality is passed if the hoses, lines and seals are not damaged and the vacuum is functioning properly as shown by the visual indicator on the vacuum during a dispensing operation.

5.4.8 For the purposes of subclause 54F(5)(b), the person must be trained to check the prescribed control equipment in the following manner:

- they must be instructed in correctly identifying an operating vacuum as seen by the visual indicator on the vacuum during a dispensing operation
- they must be trained to fully inspect hoses and seals for flattened or kinked hoses and damaged seals on vapour recovery return hoses and lines
- they must be shown how to enter weekly checks in the petrol service station log book indicating if the vacuum is operational and whether hoses and seals are fit for the purpose.

Periodic testing requirements for automatically monitored systems

5.4.9 For the purposes of clause 54E(1), the prescribed control equipment for an automatically monitored system must be tested in the following manner and at the following times:

Test	Timing
Test for vapour system recovery performance with a test which meets VDI specification 4205: Part 2 – Wet method or Part 3 – Dry method or equivalent vapour system recovery performance test specified in Appendix 4.	Every 3 years.
Note: vapour containment integrity testing of the VR1 system is not required where automatic monitoring is in place.	

5.4.10 For the purposes of clause 54E(2), a petrol dispenser must not be operated unless the most recent test result met the following standard:

- the vapour system recovery performance test found that the V/L ratio was between 95% and 105% inclusive (see Appendix 2).

5.5 Reporting requirements

5.5.1 For the purposes of clause 54G(1), written notice to the EPA on commissioning must take the following form:

- complete and sign the form entitled 'Commissioning of Stage 1 and/or Stage 2 vapour recovery' provided in Appendix 1.

The form must be submitted within one month of the commissioning of new and modified Stage 1 and Stage 2 vapour recovery systems.

5.5.2 For the purposes of clause 54G(2), the annual report to the EPA of significant failures must take the following form:

- complete and sign the form entitled 'Significant vapour recovery system faults annual report' provided in Appendix 1.

The form must be submitted within one month of the end of the financial year.

5.5.3 For the purposes of subclause 54G(3)(c), the number of warnings by an automatic monitoring system is more than **two**.

6. Advice on best practices for achieving compliance

This section provides recommendations to help petrol service station operators maximise vapour recovery. The recommendations are not mandatory, although voluntary compliance with them is recommended as industry best practice.

6.1 Stage 1 vapour recovery

Operational techniques

In addition to the requirements of clause 54A(2), the following VR1 operational control techniques should be used where VR1 equipment is installed:

- before a fuel delivery, connect the vapour return hose first to the road tanker and then the storage tank, and then attach the delivery hoses
- if storage tanks or road tanker compartments are dip-tested before delivery, close the dip openings and seal them securely before delivery
- close all road tanker compartment vents and discharge valves on completion of the delivery, unless it would be unsafe to do so
- on completion of unloading, discharge and disconnect the delivery hoses first, and then the vapour hose; disconnect the delivery hoses at the road tanker end first and the vapour return hose at the storage tank end first
- securely seal all connection points after delivery to prevent vapour loss
- if storage tanks or road tanker compartments are dip-tested after delivery, close the dip openings and seal them securely immediately afterwards to prevent vapour loss
- close access entry points to storage tanks and keep them securely sealed except in an emergency or when carrying out any maintenance, testing or tank gauging which require entry to the tank.

General

- All tank vents should be situated to not cause a hazardous or unsafe environment. Consideration should be given to all relevant Australian standards and codes. For example, the position of window openings and air conditioning air intakes to any on-site or adjacent buildings should be considered.
- Overfill prevention devices reduce liquid spills and subsequent petrol vapour emissions. Overfill prevention devices are only prescribed control equipment for new petrol service stations but they are widely used internationally and should be considered industry best practice even for existing petrol service stations.

Automatic monitoring of tank pressure

This section refers specifically to automatic pressure monitoring rather than automatic monitoring for vapour system recovery. Whilst petrol service stations with an annual throughput of more than 7 million litres are required to install an automatic monitoring system, automatic **pressure** monitoring is not mandatory but is also recommended for **all** petrol service stations, **regardless of throughput**. Use of automatic monitoring systems is considered best practice.

If a **certified** automatic pressure monitoring system is present, the Regulation allows periodic testing of vapour containment and inspections of the orifice and pressure vacuum valve to be avoided.

The Regulation requires that an automatic pressure monitoring system must detect faults in the proper functioning of the VR1 system and indicate faults to the operator. Such an automatic pressure monitoring system must also be able to detect faults in its own operation.

The underground storage tank and piping vapour containment system is considered to be functioning correctly when the pressure ranges between 1.85 kilopascals below ambient atmospheric pressure and 0.60 kilopascals above ambient atmospheric pressure. If the pressure readings are consistently within ± 0.05 kilopascals, the pressure detection is likely to be faulty.

Technical guidance on requirements for certification of automatic pressure monitoring systems

To be certified, the automatic pressure monitoring system must be able to detect the following fault conditions in the underground storage tank and vapour piping vapour containment system:

1. Vapour pressure, over a continuously moving 1-hour test period, exceeds 0.75 kilopascals above ambient atmospheric pressure or 2 kilopascals below ambient atmospheric pressure for at least 30 minutes

The monitoring system must post a warning alarm when the fault occurs at least once in a test day and recurs for seven consecutive days. The monitoring system should continue to post daily warning alarms if the fault persists and automatically cut off the flow of fuel if the fault is not rectified within 30 days.

2. Vapour pressure, over a continuously moving 1-hour test period, exceeds 1.25 kilopascals above ambient atmospheric pressure or 2.5 kilopascals below ambient atmospheric pressure for at least three minutes

The monitoring system must post a warning alarm immediately when the fault first occurs. If the fault recurs, additional warning alarms must be posted each time. If the fault is present at least once during a test day, the monitoring system must also post a daily alarm(s) summary. Where a fault of this kind is present and continues for consecutive days, the monitoring system must continue to post daily warning alarm summaries and automatically cut off the flow of fuel if the fault is not rectified within seven days.

3. Vapour pressure, over a continuously moving one-hour test period remains within ± 0.05 kilopascals relative to ambient atmospheric pressure

The monitoring system is required to post a warning alarm when the fault condition occurs for at least 23 out of 24 hours throughout a test day. Where a fault of this kind is present and continues for consecutive days, the monitoring system must continue to post daily warning alarms and automatically cut off the flow of fuel if the fault is not rectified within seven days.

Technical notes on automatic pressure monitoring

The automatic pressure monitoring system should be certified by German TÜV as meeting the conditions and criteria established in this section of these Standards and Guidelines, and in accordance with the following specifications:

- pressure samples are to be taken on average at least once every 30 seconds to be considered continuous monitoring
- a 'test day' is any 24-hour period starting and ending at a specified start time (e.g. 8:00 am)

- a 'no test' result may be issued if the pressure remains within ± 0.05 kilopascals because the vapour containment system is not in use
- all test results and warnings must be available at the end of each test day except where immediate warning is required. Results for each test type must include at least a qualitative indication of 'pass', 'warn', 'shutdown', or 'no test'. 'Warn' or 'shutdown' must also include a quantitative indication of the fault.
- The monitoring system must retain the date and type of the last one hundred faults and one year of daily pressure data. The data must be easily accessible to operators or inspectors.

6.2 Stage 2 vapour recovery

Petrol service stations are not constrained in how they recover vapour during filling of vehicle petrol tanks, provided that the minimum hydrocarbon capture efficiency requirements are met and the provisions of the Regulation in relation to equipment type approval are adhered to.

The following is an example of control equipment and techniques that can be used. Regardless of the equipment used, in all cases it must be approved as prescribed in the Regulation.

Automatic monitoring systems are recommended for all Stage 2 vapour recovery systems.

Open active vapour recovery system with return of vapour to underground storage tank

When petrol enters the vehicle fuel tank, an open active petrol vapour recovery system uses a vacuum pump to draw a proportional volume of vapour back into a storage tank. Typical components of an open active vapour recovery system include:

- a vapour recovery nozzle
- a coaxial hose through which vapour is collected, and a pipe through which the vapour is returned
- a vacuum pump, either multiple distributed units or a central unit
- a system to control the ratio of the volume of vapour recovered to the volume of petrol dispensed, which can be achieved by using a proportional valve controlled either hydraulically or electronically or by controlling the speed of the vacuum pump
- a vapour storage tank, i.e. the petrol storage tank.

6.3 Risk management

The occupier of a petrol service station must take all practical measures to manage the risk associated with the storage and handling of dangerous goods. For example the NSW occupational health and safety legislation, the *National Occupational Health and Safety Commission's National Standard for the Storage and Handling of Workplace Dangerous Goods*, and the *National Code of Practice for the Storage and Handling of Dangerous Goods*, as well as all other applicable laws, will be very relevant for the conduct of vapour recovery at petrol service stations.

Before a vapour recovery system is installed at a petrol service station, a thorough risk analysis for the site should be undertaken by a duly qualified person who has competencies and experience that are recognised as appropriate for the task by the industry. A duly qualified person includes personnel that have been trained, authorised and accredited by the manufacturer of the vapour recovery system.

All vapour recovery equipment used should be designed, installed and tested with reference to relevant Australian and international standards, national methods, codes of practice and industry guidelines that were in place when the equipment was installed, unless prescribed by the Regulation or these Standards and Guidelines. Some relevant reference documents are listed in Appendix 2.

Appendices

Appendix 1: Reporting templates

Send completed reports to:

Vapour recovery reporting
Air Policy Section
Department of Environment, Climate Change and Water
PO Box A290
Sydney South, NSW 1232

Report 1: Commissioning of Stage 1 and Stage 2 vapour recovery

General information required

1. Name and address of petrol service station

Name:	ABN (if applicable):
Address:	

2. Details of person responsible for petrol service station

Name:	Telephone:
Email:	

3. Annual petrol throughput of petrol service station (for new petrol service stations show designed throughput). Tick appropriate box:

- less than 500 kL
- greater than or equal to 500 kL but less than 3.5 ML
- greater than or equal to 3.5 ML but less than 7 ML
- greater than or equal to 7 ML but less than 12 ML
- greater than or equal to 12 ML

4. Number of petrol dispensers

5. Number of petrol-dispensing nozzles

6. Petrol dispenser make and model

Make:
Model:

7. Date of inspection

Date (dd/mm/yy):

8. Name and contact details of service technician/tester

Name:	Telephone:
Email:	
Address:	

9. Reason for reporting. Tick appropriate box:

- Stage 1 vapour recovery commissioned (answer questions 10–14 and sign report at the end of the form)
- Stage 2 vapour recovery commissioned (answer questions 15–20 and sign report at the end of the form)
- Stage 1 and Stage 2 vapour recovery commissioned (answer all questions and sign report at the end of the form)

Stage 1 vapour recovery commissioning report

10. Stage 1 vapour recovery date of commissioning

Date (dd/mm/yy): / /

11. Pass date of pre-commissioning tank integrity test

Date (dd/mm/yy): / /

Required test: Equipment integrity test in AS-4897: 2008, section 8.5 or liquid space leak test for NSW Protection of the Environment Operations (Underground Petroleum Storage Systems) Regulation 2008 (UPSS) Divisions 3, clause 14 (1). A pass result in the last three years is acceptable.

12. Is automatic pressure monitoring certified by German TÜV present?

Yes

No

13. Have the underground storage tank and vapour recovery pipes and components passed the vapour containment integrity test?

Yes

No

Required test:

- (i) using a test on the dry portion of the tank and lines capable of detecting a gas leak equivalent to 0.38 litres per hour, in accordance with AS 4897-2008, or
- (ii) for new tanks, CARB Vapor Recovery Test Procedure TP-201.3 with the orifice blocked or isolated, or
- (iii) for existing/modified tanks, CARB Vapor Recovery Test Procedure TP-201.3A with the orifice blocked or isolated.

14. Vapour containment test results

Number of underground storage tanks			
Tank number		Tank number	
Capacity of tank		Capacity of tank	
Number of nozzles		Number of nozzles	
Fuel volume		Fuel volume	
Ullage		Ullage	
Initial pressure		Initial pressure	
Final pressure		Final pressure	
Allowable final pressure		Allowable final pressure	
Tank number		Tank number	
Capacity of tank		Capacity of tank	
Number of nozzles		Number of nozzles	
Fuel volume		Fuel volume	
Ullage		Ullage	
Initial pressure		Initial pressure	
Final pressure		Final pressure	
Allowable final pressure		Allowable final pressure	

Where additional tanks are present, please attach additional test results on separate sheet.

Stage 2 vapour recovery commissioning report

15. Name of Stage 2 vapour recovery system manufacturer

16. Stage 2 vapour recovery compliance certificate number and issuer

Certificate number:
Issuer:

17. Type of Stage 2 vapour recovery monitoring (V/L ratio monitoring)

- Automatic
- Manual

18. Stage 2 vapour recovery date of commissioning

Date (dd/mm/yy):

19: Have all dispenser hoses passed a leak test?

- Yes
- No

20. If an automatic V/L ratio monitoring system is fitted, is it operating correctly?

- Yes
- No

21. Vapour recovered to petrol dispensed (V/L) ratio test results for each dispenser

Dispenser number	Dispenser side	Grade name	V/L ratio and fuel flow rate

Report 2: Significant vapour recovery system faults annual report

Do not report unless significant faults occur

Report on significant failures in any financial year (1 July–31 June) at end of financial year.
Report by 30 July in the subsequent year.

A 'significant failure' has occurred when there are:

- vapour containment failures, where repairs required opening of the forecourt
- six-monthly tests of the V/L ratio in a manual monitored system that show vapour system recovery had fallen below 85%
- three or more warnings generated by an automatic system in any six-month period.

Date of report (dd/mm/yy):

1. Name and address of petrol service station

Name:

Address:

ABN (if applicable):

2. If the petrol service station annual petrol throughput has changed so that the petrol service station is now in a different category, please indicate the new category of throughput:

- not applicable
- less than 500 kL
- greater than or equal to 500 kL but less than 3.5 ML
- greater than or equal to 3.5 ML but less than 7 ML
- greater than or equal to 7 ML but less than 12 ML
- greater than or equal to 12 ML

3. Please list the type of fault occurring and date of fault in the vapour recovery system (attach additional pages if required).

Date	Type of fault	What repairs were required? How long did repairs take?	Name and contact details of service technician/fester
	<input type="checkbox"/> Forecourt opened to repair vapour containment <input type="checkbox"/> Measured V/L ratio below 85% <input type="checkbox"/> System generated 3 or more warnings in 6 months		
	<input type="checkbox"/> Forecourt opened to repair vapour containment <input type="checkbox"/> Measured V/L ratio below 85% <input type="checkbox"/> System generated 3 or more warnings in 6 months

Appendix 3: Collated regulatory requirements

Stage 1 vapour recovery prescribed control equipment

Table A3.1 sets out the prescribed control equipment for Stage 1 vapour recovery.

Table A3.1: Prescribed control equipment for Stage 1 vapour recovery

Equipment	Specification	Regulation reference
vapour transfer system	Trucks used to supply petrol to petrol service stations must be equipped with vapour return lines to which the petrol service station vapour transfer system is connected.	subclause 54A(2)(a)
coupling for the vapour return line	A coupling on the vapour return line that makes a vapour-tight connection with the vapour return hose on the delivery tank and that closes automatically when disconnected	subclause 54A(2)(b)
fill pipe	A submerged fill pipe that terminates below the lowest point of any suction inlet used for the pumping of petrol out of the storage tank	subclause 54A(2)(c)
overfill prevention device	A new petrol service station must have an overfill prevention device installed in the tank fill piping or a supply system that slows delivery of petrol into the storage tank to prevent overfilling.	subclause 54A(2)(d)(i)
	If the overfill prevention device is electrically powered or contains electronic components, the overfill prevention device must meet the following standards: <ul style="list-style-type: none"> it must be constructed in accordance with relevant safety and electrical standards it must be installed in accordance with relevant safety and electrical standards. 	subclause 54A(2)(d)(ii)
storage tank overfill protection	Storage tank overfill protection, comprising a float vent valve positioned: <ul style="list-style-type: none"> above the highest point of any overfill prevention device when in the closed position so the valve shuts off the flow into the storage tank at the level advised by the manufacturer of the storage tank or, if no level is advised, at 95% of the storage tank's capacity. 	subclause 54A(2)(e)
connection points and seals	Spill containment enclosures for all storage tank fill connection points.	subclause 54A(2)(f)
	A coupling on the storage tank's fill pipe that makes a liquid-tight connection with the delivery tank's liquid transfer hose	subclause 54A(2)(g)
	Secure seals on connection points of tank filling pipes and vapour return pipes that minimise vapour leaks when those pipes are not in active use	subclause 54A(2)(h)
	Secure seals for the apertures for the use of a dipstick, if dip hatches are provided on the storage tank	subclause 54A(2)(i)
incompatible fittings	Fittings on the petrol delivery lines and hoses must be incompatible with the fittings on the vapour return lines and hoses so as to prevent misconnection or the accidental discharge of liquid petrol into the vapour return lines or pipes	subclause 54A(2)(j)

	A pressure vacuum valve and a 10 millimetre orifice in parallel fitted to the storage tank vent pipe. Similar devices are permitted where they can be shown by an accepted certifying agency to achieve the same requirements.	subclause 54A(2)(k)
storage tank vent pipe	<p>Pressure vacuum relief valves must achieve the following:</p> <ul style="list-style-type: none"> • the settings criteria are: <ul style="list-style-type: none"> – the device must be sized and weighted to allow an emergency release of vapours at not more than 80% of maximum tank design pressure – the device must be of a type that conforms with any applicable standards published by Standards Australia, European Standards or United States Underwriters Laboratories (UL) and have certification by UL or the German TÜV or meet the criteria established in California Air Resources Board Certification Procedure CP201 of May 25 2006, section 3.5. • is of a size and type and possesses the safety features that a duly qualified person has advised is suitable. • is installed in accordance with the advice of a duly qualified person • in the case of a device installed at a new petrol service station — the device must be set to be closed when the pressure in the storage tank is between 1 kilopascal above, and 2 kilopascals below, ambient pressure. 	subclause 54A(2)(k)(i) subclause 54A(2)(k)(ii) subclause 54A(2)(k)(iii) 54A(2)(k)(i)
	A 'duly qualified person' means a person who has such competence and experience in relation to the activity as is recognised in the relevant industry as appropriate to carry out that activity.	clause 47
	Where a device similar to a 10-millimetre orifice is to be used in the vent line, it must have certification from a testing authority accepted by the EPA that it retains 97% of vapour in the proposed system.	subclause 54A(2)(k)
	Where a device similar to a pressure vacuum valve is used, it must have settings that can provide emergency relief of excessive pressure or vacuum and vent a sufficient volume flow rate to prevent exceedences of maximum tank design pressure/vacuum under adverse conditions. When the device is in the closed position, it must provide a seal against leakage with the same performance as that included in the CARB TP201.1E leak test. The device must be certified by a testing authority accepted by the EPA.	subclause 54A(2)(k)
vapour processing unit	<p>Where a storage tank is fitted with a vapour processing unit, it must be, before commissioning, certified by the manufacturer or supplier as being of the following type and having a hydrocarbon capture efficiency of at least 97%:</p> <ul style="list-style-type: none"> • a vapour processing unit certified by the German TÜV, in accordance with the provisions of the Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSch V, section 3(6) [2002] (see Appendix 2), or • a vapour processing unit certified by the California Air Resources Board (CARB) as meeting the criteria established in Certification Procedure CP-201 and conforming to Vapor Recovery Test Procedure TP-201.2 (see Appendix 2). 	subclause 54A(2)(l)

Stage 2 vapour recovery prescribed control equipment

Table A3.2 sets out the prescribed control equipment for Stage 2 vapour recovery.

Table A3.2: Prescribed control equipment for Stage 2 vapour recovery

Equipment	Specification	Regulation reference
vapour recovery system	<p>A vapour recovery system is to be fitted to the petrol dispenser. Before commissioning, the vapour recovery system must be certified by the manufacturer or the supplier as being of the following type and hydrocarbon capture efficiency:</p> <ul style="list-style-type: none"> • Type: a Stage 2 vapour recovery system approved by the German TÜV. The approval must be in accordance with the provisions of Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSchV section 3, paragraph 6 [2002] (see Appendix 2). • Hydrocarbon capture efficiency: a hydrocarbon capture efficiency of not less than 85% vapour recovery to liquid dispensed by volume as measured using a test for active vapour recovery systems in VDI specification 4205 (see Appendix 2). • The certification obtained must certify that the Stage 2 vapour recovery system achieves 85% vapour recovery and must specify the test used. 	subclause 54D(2)(a)
	Is installed in accordance with the manufacturer's specifications by a duly qualified person.	subclause 54D(2)(b)
	Before commissioning, is tested by a duly qualified person in the manner specified in section 5.4.1.	subclause 54D(2)(c)
	A 'duly qualified person' means a person who has such competence and experience in relation to the activity as is recognised in the relevant industry as appropriate to carry out that activity.	clause 47
automatic monitoring system (mandatory for petrol stations with an annual throughput of more than 7 million litres)	<p>The automatic monitoring system must be certified by the German TÜV in accordance with the provisions of Ordinance on the Limitation of Hydrocarbon Emission Resulting from the Fuelling of Motor Vehicles – 21, BImSch V (section 3, clause 5) [2002] with the exception that the number of days until the automatic system shuts off the flow is to be seven days. The test procedure for demonstrating the correct function of the automatic monitoring system is VDI specification 4205.</p> <p>Automatic monitoring systems must provide a visual indication of the operational status of each fuelling point.</p>	subclause 54F(1)(e)

Log book requirements

Any relevant information relating to the prescribed control equipment or its installation, necessary for its correct and efficient operation and management, must be recorded in a log book.

Clause 54I (3) requires the following items to be recorded or stored in the log book:

- the name, address and contact details of the person with overall responsibility for the petrol service station vapour recovery system
- a description of the installed prescribed control equipment, including types, serial numbers (if any) and the manufacturer's or supplier's equipment certificates
- the name and address of the person with overall responsibility for installing and commissioning the vapour recovery system
- a description of the testing of the operation of the prescribed control equipment including the type of test, all test results and the name and address of the person with overall responsibility for carrying out the test
- details of repairs and maintenance
- weekly check results for manual monitoring
- a description of any incidences involving faults with or malfunction of the vapour recovery system and the measures taken to investigate and respond to the incident
- the date of the last report to the EPA.

Details of anything done prior to commencement of the amended Regulation do not need to be recorded. The records need to be kept for three years, even if the petrol service station is decommissioned.

Appendix 4: Vapour system recovery test method for determining the vapour to petrol recovery efficiency of Stage 2 vapour recovery systems

This method is used for checking the recovery performance of vacuum assisted vapour recovery systems in petrol service stations in NSW.

The ratio of vapour captured to petrol dispensed (V/L) needs to be tightly controlled in Stage 2 vapour recovery (VR2) systems. If too little vapour is recovered, petrol vapours are emitted at the point of refueling. If too much vapour is recovered, pressure builds up in the underground tank, causing emissions of petrol vapour through the vent.

During the vapour system recovery test, the volume of vapour recovered and fuel dispensed are simultaneously measured. To measure the vapour recovered, a tight fitting adaptor is fitted to the spout of the vacuum assist nozzle so all vapour collected passes through the adaptor. The adaptor is connected to a gas flow meter, to determine the volume of gas collected.

Measurement of vapour recovery through petrol dispensers may be undertaken using a 'wet method' where petrol is dispensed, or using a 'dry method'. In the latter method, the V/L ratio electronic controller is sent a signal that simulates the signal it would normally receive while petrol is dispensed, so that the vapour recovery system operates and the vapour recovery rate can be measured. The wet method is used as the reference method. However, the inconvenience of the amounts of fuel dispensed and resultant hazardous environment precludes routine use of the wet method, so the dry method has been more widely used.

Prior to measuring the V/L ratio, the system must have passed a vapour path leakage test conducted in accordance with manufacturer's instructions. For pre-commissioning tests, the vapour recovery system installation must be completed to the standard recommended by vapour recovery system manufacturer prior to testing.

Prior to conducting the vapour system recovery test procedure, the technician must have the necessary competency and training in the operation of the dispenser, the vapour recovery equipment and the vapour recovery test equipment on petrol service station forecourts. The technician must have the appropriate training and accreditation from the equipment supplier before any adjustments or repairs are made to the vapour recovery equipment, calibration or K- factor settings.

Test equipment

The **measuring adaptor** connects the dispenser nozzle to the gas flow meter through a connecting hose. The nozzle adaptor must be compatible with the nozzles to be tested. The seals must be in good condition – no nicks, tears or defects. An appropriate grease may be used to ensure a vapour tight seal. The hose between the nozzle adaptor and the gas meter should be no more than three metres long with smooth inner walls and an inside diameter of at least 20 millimetres. A clear hose will allow any blockage to be readily visible but is not mandatory.

The **gas flow meter** is sensitive to small air flows. The gas flow meter must be able to read accurately from 15 litres per minute to 120 litres per minute, with a minimum readability of 0.25 litres.

- The **bellows type** should be checked every 6 months, or according to the manufacturers' recommendations, by a recognised testing authority to equal or exceed $\pm 2\%$ at 40 litres per minute.

- The **impeller types** should be checked every 2 months, or according to the manufacturers' recommendations, by a recognised testing authority to equal or exceed $\pm 1\%$ at 40 litres per minute.
- **Other** types of meter should meet at least $\pm 1\%$ with calibration intervals advised by the meter manufacturer.

Gas flow meters should be marked with the last calibration date and test authority. Only gas flow meters that have been calibrated within the period specified above for that type of meter may be used. Other factors that affect the gas meter need to be considered:

- gas meters meet the specified accuracy only when used within the temperature range specified by the manufacturer and for which they have been calibrated
- for automated calculations, the gas flow meter needs a signal output (such as an electrical pulse)
- the calibration factor of the bellows-type gas meter is needed to calculate the measured volume from the generated signal.

Dry method

This method may be used to measure V/L ratio on vacuum assisted ('active') Stage 2 vapour recovery systems in NSW with simulated dispensing of fuel.

Additional dry method test equipment

Handheld control: an electronic device that can be adjusted to send and receive signals to and from the vapour recovery controller to simulate petrol from the dispenser nozzle, and to adjust the controller as required. The device should be programmed to simulate petrol flow for the VR2 controller to be tested. It must also use the correct calibration factor for the **bellows-type** gas flow meter in use.

This handheld control is typically supplied by the vapour recovery system supplier and must be approved by the manufacturer for use with supplied vapour recovery system. Follow the operation instructions supplied with the handheld controller.

For electronic systems:

$$\text{Correction Factor} = \frac{\text{Vapour Recovery Rate (Air)}}{\text{Vapour Recovery Rate (HC - Vapour)}}$$

All electronic test and calibration equipment used on petrol forecourts must be approved for the hazard zone in which it will be used. The measuring instruments must be periodically checked.

Pretest procedures

Place the measuring adaptor over the dispenser nozzle and connect it to the bellows-type gas flow meter. Ensure the adaptor does not leak and that the connecting hose does not leak or offer excessive resistance to gas flow. The connecting hose should be laid relatively flat, with no loops or kinks, to not cause bottlenecks in the flow path.

The equipment must be appropriately electrically grounded. If a vapour processor unit is present, check the manufacturer's instructions to determine whether the vapour system recovery test should be conducted with the processor on or off.

Connect the signal output of the bellows-type gas flow meter to the handheld control. Ensure that the calibration factor of the bellows-type gas flow meter is stored in the handheld control memory. Connect the handheld controller to the Stage 2 vapour recovery controller to be tested. Figure A1 shows the dry method test equipment set up for a dispenser with a self contained vacuum pump. If a central vacuum system is present, the dispenser will contain only the central vacuum control components.

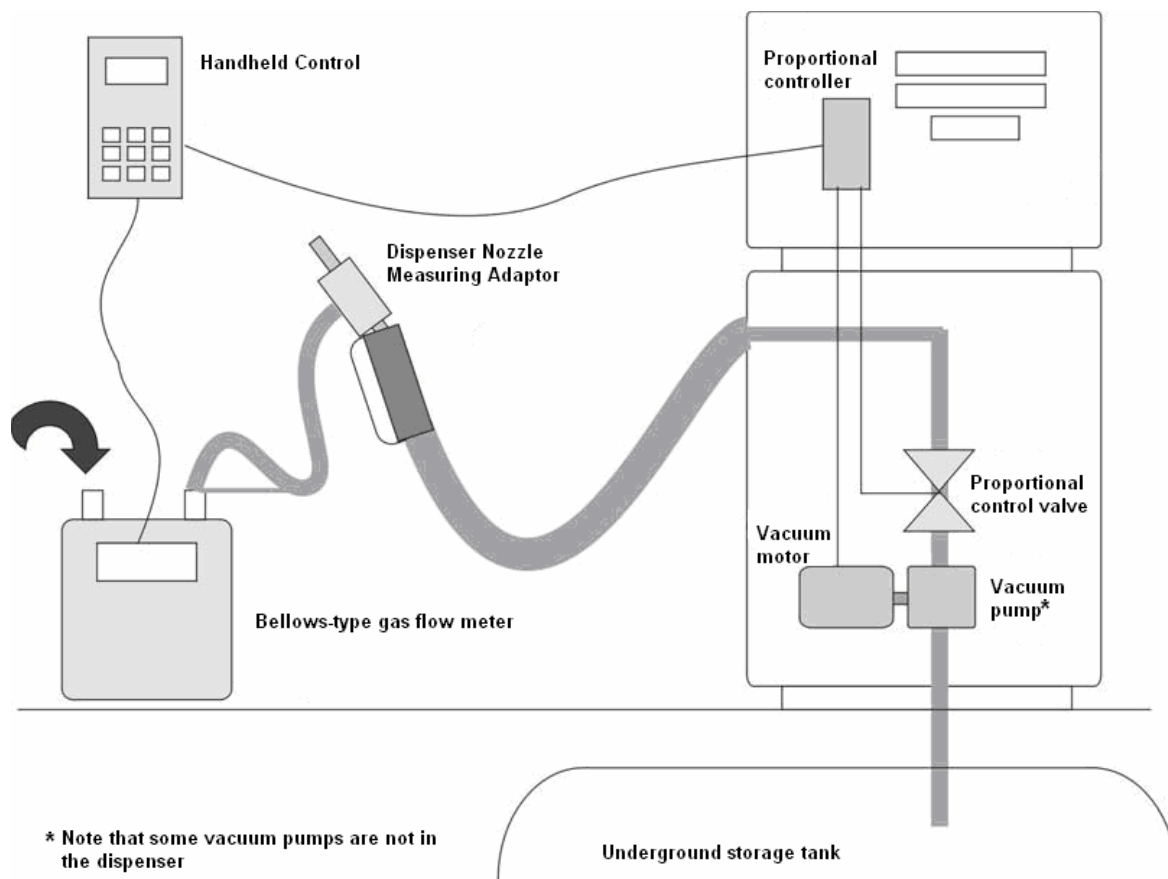

Figure A1: Typical dry method test equipment set up

Dry method measurements

1. Ensure all equipment is connected and switched on.
2. Start the simulated dispensing of petrol.
3. When sufficient simulated volume of petrol has been 'dispensed', stop the hand held controller.
4. The hand held controller will use the signal from the gas flow meter, the programmed calibration factor and the correction factor to calculate the V/L ratio. Record the V/L ratio measured.

If the nozzle fails the test by a small margin, do the test twice more. Average the V/L ratios for all three tests. If the V/L ratio is between 0.95 and 1.05, the nozzle passes.

Wet method

This method may be used to measure V/L ratio on vacuum assisted ('active') Stage 2 vapour recovery systems in NSW during dispensing of fuel.

Additional wet method test equipment

A suitable **portable fuel tank** is needed in which to dispense the fuel. The fuel tank must meet all applicable safety standards and be grounded, to avoid static discharge. The tank capacity must be large enough to receive 30 litres of fuel without triggering the automatic cut off in the fuel dispenser.

The dispenser flowmeter can be used to determine the fuel dispensed.

A **stopwatch** accurate to 0.2 seconds is needed to measure the test time.

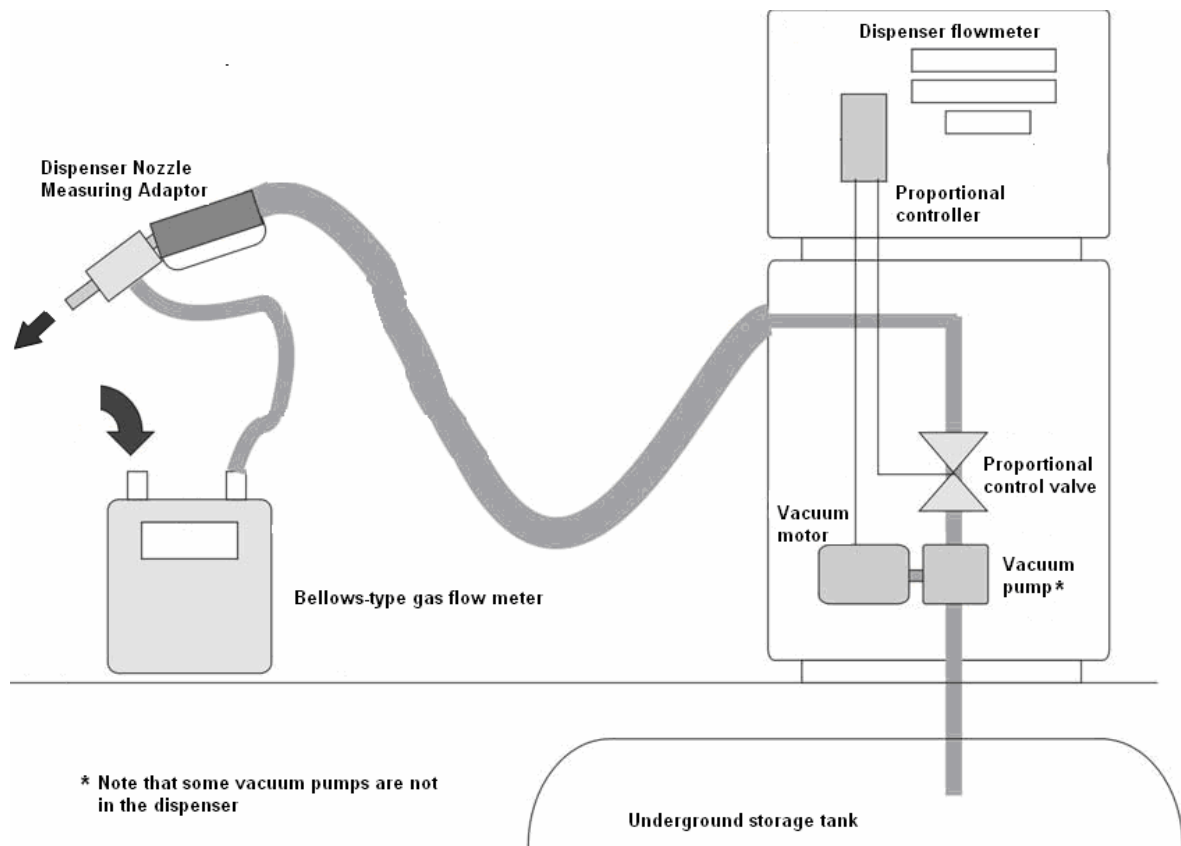

Figure A2: Typical wet method test equipment set up

Figure A2 shows the wet method test equipment set up for a dispenser with a self contained vacuum pump. If a central vacuum system is present, the dispenser will contain only the central vacuum control components.

Pretest procedures

Check the equipment certification of the equipment to be tested to determine the quantity of fuel to be dispensed during the test. This will normally be 28–30 litres.

Place the measuring adaptor over the dispenser nozzle and connect to the bellows-type gas flow meter. Ensure the adaptor does not leak and that the connecting hose does not leak or offer excessive resistance to gas flow. The connecting hose should be laid relatively flat, with no loops or kinks, to not cause bottlenecks in the flow path.

The equipment must be appropriately electrically grounded. If a vapour processor unit is present, check the manufacturer's instructions to determine whether the vapour system recovery test should be conducted with the processor on or off.

Wet method measurements

1. Ensure all equipment is connected and switched on.
2. Note the reading on the gas flow meter immediately prior to starting the test.
3. Make sure the petrol flow meter has been reset.
4. Reset the stopwatch.
5. Start the stopwatch and dispense the predetermined volume of petrol into a suitable receptacle.
6. Stop the stopwatch and the petrol dispensing at the same time.
7. Record the volume of fuel dispensed, time to dispense the fuel and the volume of vapour recovered.
8. The volume flow-rate of the fuel equals the volume dispensed divided by the time taken to dispense the fuel. Calculate the volume flow-rate and check it is greater than 25 litres/minute.
9. Record the test results.

The V/L ratio equals the volume of gas recovered, multiplied by the correction factor for the gas meter, divided by the volume dispensed. If the V/L ratio is between 0.95 and 1.05 inclusive, the nozzle passes the test.

If the nozzle fails the test by a small margin, do the test twice more. Average the V/L ratios for all three tests. If the V/L ratio is between 0.95 and 1.05, the nozzle passes.

Notes: If liquid enters the dispenser vapour piping, the nozzle has failed the test.

V/L ratio

The V/L ratio must fall between 95% to 105% for:

- the on-site pre-commissioning calibration
- the six monthly check for manual monitored systems
- the three-yearly check for automatically monitored systems.

When the Stage 2 vapour recovery system passes the test, the installer/system tester must complete a 'compliance certificate' of the complete system and supply the retailer with one copy for site records. The form at the end of the test method may be used for recording data during the test.

Vapour to petrol ratio (V/L) test results for each dispenser

Department of Services, Technology & Administration

TRAVEL AGENTS ACT 1986

LIST OF LICENSED TRAVEL AGENTS

SECTION 40 (2) of the Travel Agents Act 1986 requires the Director-General to publish in the Government Gazette from time to time a list of licence holders.

Section 40 (7) of the Act deems the supplier of travel services to an unlisted travel agent to have aided and abetted that person in carrying on business as a travel agent. Thus the supplier could be subject to the same penalty of 500 penalty units as the agent is trading without a licence.

Suppliers of travel services should not deal with an unlisted person or corporation unable to produce a travel agent's licence.

Director-General

LIST OF LICENSED TRAVEL AGENTS

Date of Preparation: 19-Nov-2009
Date list comes into force: 27-Nov-2009
Date list ceases to be in force: 11-Dec-2009

PRIVATE ADVERTISEMENTS

COUNCIL NOTICES

BATHURST REGIONAL COUNCIL

Roads Act 1993, Section 10

Dedication of Land as Public Road

NOTICE is hereby given that Bathurst Regional Council at its meeting of 21 October 2009 resolved to dedicate land in Lot 1, DP 917011 to the public as road to be known as Triangle Flat Road, Triangle Flat. The land described in the Schedule below is hereby dedicated as Council Public Road pursuant to section 10 of the Roads Act 1993. D. J. SHERLEY, General Manager, Bathurst Regional Council, PMB 17, Bathurst NSW 2795.

SCHEDULE

Lot 1, DP 917011, Parish of Rockley, County of Georgiana. [4947]

CENTRAL DARLING SHIRE COUNCIL

Unincorporated Area / Central Darling

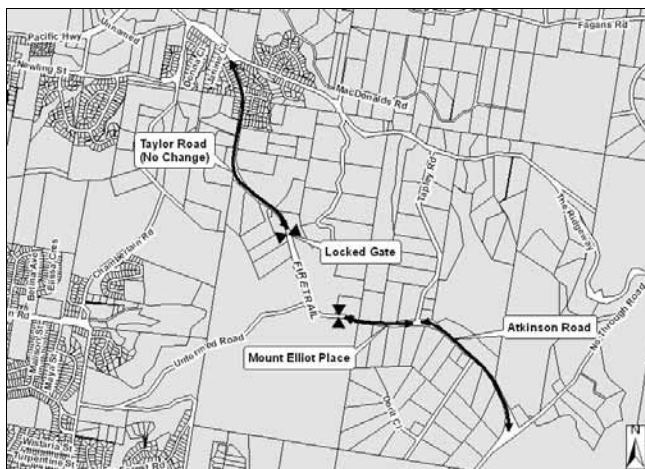

CENTRAL DARLING Shire Council has formally resolved to rename Shire Road number 4 from Monolon Road to Reola Road. [4948]

GOSFORD CITY COUNCIL

Roads Act 2008

Naming of Public Roads – Atkinson Road and Mount Elliot Place Mount Elliot

NOTICE is hereby given that Council has renamed the Mount Elliot portion of Taylor Road to the east of the Tapley Road intersection Atkinson Road and the section of road west of the Tapley Road intersection Mount Elliot Place. Authorised by Council Resolution on 3 November 2009. P. WILSON, General Manager, Gosford City Council, PO Box 21, Gosford NSW 2250.

[4949]

GOSFORD CITY COUNCIL

Roads Act 2008

Naming of Public Roads – Masson Lane Killcare

NOTICE is hereby Given that Council has named the unnamed laneway behind properties fronting The Scenic Road and between Grandview Crescent and Putty Beach Drive, 'Masson Lane' Killcare. Authorised by Council Resolution on 3 November 2009. P. WILSON, General Manager, Gosford City Council, PO Box 21, Gosford NSW 2250.

[4950]

MARRICKVILLE COUNCIL

Heritage Act 1977

Revocation of Interim Heritage Order No. 5 of 2009

PURSUANT to section 29 (4) of the Heritage Act 1977, Marrickville Council revokes the interim heritage order made on 13 August 2009 applying to the item of the environmental heritage described in Schedule 'A' and the land described in Schedule 'B' which was published in the *Government Gazette* of 21 August 2009. Dated at Petersham, 10 November 2009. NEIL STRICKLAND, Acting General Manager, Marrickville Council.

SCHEDULE 'A'

The item known as 21 Edgar Street and situated on the land described in Schedule 'B'.

SCHEDULE 'B'

All those pieces or parcels of land known as Lot A, DP 386161. [4951]

PALERANG COUNCIL

Roads Act 1993

Land Acquisition (Just Terms Compensation) 1991

Notice of Compulsory Acquisition of Land

PALERANG COUNCIL declares, with the approval of Her Excellency the Governor, that the land described in the Schedule below, excluding any mines or deposits of minerals in the land, is acquired by compulsory process in accordance with the provisions of the Land Acquisition (Just Terms Compensation) Act 1991, for the purposes of widening a public road. P. BASCOMB., General Manager, Palerang Council, PO Box 348, Bungendore NSW 2621.

SCHEDULE

Lot 1, DP 1133790.

[4952]

PARKES SHIRE COUNCIL

Roads Act 1993, Section 162.1

Naming of Public Roads

Ormonde Lane, Cookapie Creek Lane, Kinsela Lane,
McGirr Street

NOTICE is hereby given that in accordance with section 162.1 of the Roads Act 1993, as amended, Parkes Shire Council have named the roads shown hereunder:

Change to Ormonde Lane	Middlefield Road (east of Alagala Road)
Cookapie Creek Lane	Shire Road 131
Kinsela Lane	Lane off Nash Street and Back Yamma Road, Parkes
McGirr Street	Lane between Station and Alluvial Street, Parkes

No objections to the proposed names were received within the prescribed period of time. A. McCORMACK, General Manager, Parkes Shire Council, PO Box 337, Parkes NSW 2870. [4953]

PORT STEPHENS COUNCIL

Roads Act 1993, Section 10

NOTICE is hereby given that pursuant to section 10, Road Act 1993 Council hereby dedicates, as public road, the Council owned lands set out in the schedule below. Dated at Raymond Terrace, 27 November 2009. P. GESLING, General Manager, Port Stephens Council, PO Box 42, Raymond Terrace NSW 2324. (Council file A2004-1002 and 1011).

SCHEDULE

Lot 1, DP 877640; Lot 2, DP 856167. [4954]

RIVERINA WATER COUNTY COUNCIL

Local Government Act 1993, Section 553

Extension of Watermains

NOTICE is hereby given pursuant to section 553 of the Local Government Act 1993, that Riverina Water County Council's water mains have been extended to service the lands described hereunder:

WAGGA WAGGA

Estella Stage 7 – Alma Crescent: from Dundale Crescent, north for a distance of 83 metres. Tahara Crescent: from Alma Crescent, southwest for a distance of 281 metres.

Drawing No.: 1-2818 – Aug 2009

RURALS

Kane Street, Mangoplah – Kane Street: Tywong Street, north for a distance of 130 metres.

Drawing No.: 3-1504 – Aug 2009

The owners of all lands within the prescribed distance will be liable for water supply charges as from the expiration of twenty-one (21) days after the publication of this notice, or the date of connection of the properties to the water main, whichever is the earlier date. G.W. PIEPER, General Manager, Riverina Water County Council, Box 456 PO, Wagga Wagga NSW 2650. [4955]

SINGLETON COUNCIL

COMPULSORY acquisition notice published in *NSW Government Gazette* No. 51 on 19 December 2003 [0962] was incorrectly gazetted prior to the approval of Her Excellency the Governor resulting in the gazettal being invalid. Subsequently Her Excellency the Governor provided approval and a valid Compulsory Acquisition Notice was published in *NSW Government Gazette* No. 46 on 13 November 2003. The Compulsory Acquisition relates to Lot 8 in DP 879851. SCOTT GREENSILL, General Manager, Singleton Council, PO Box 314, Singleton NSW 2330. [4956]

SINGLETON COUNCIL

Roads Act 1993, Section 10

Dedication of Land as Public Road
