INTRODUCTION

The *Explosives Regulation 2005 (Regulation)*, clause 8 provides that WorkCover NSW is the regulatory authority and may register an explosive as an authorised explosive or a prohibited explosive. Clause 9 of the Regulation makes it an offence to “handle any unauthorised explosive” and under clause 10 it is an offence to falsely represent an explosive as authorised.

This document contains a list of all explosives that are currently authorised for use in New South Wales, and includes the Commonwealth Defence Explosive Ordnance Classification Listing (DEOCL).

<p>The DEOCL Listing of Defence Explosive Ordnance, as amended from time to time, is deemed to be incorporated in this list.</p>	

2 AUTHORISED COMMONWEALTH EXPLOSIVES

2.1 Commonwealth Defence Explosives Arrangements

The Directorate of Ordnance Safety (DOS) is the technical regulator of Explosive Ordnance storage and transport activities within the Australian Defence Organisation. An important activity of DOS is the compilation of the DEOCL issued at regular intervals on a restricted basis.

2.2 Civilian Contractors

Increasingly, civilian contractors handle defence ordnance. Under a long term Australian Defence Force contract Thales Australia manufactures rifle ammunition, grenades, aircraft bombs, anti missile shells, large caliber ammunition, demolition charges and training and practice products. Also the company has a contract to warehouse, maintain and distribute the Australian Defence Forces explosive ordnance. These civilian contractors are not defence personnel or Commonwealth employees, and some of their activities come under the NSW explosives regulatory regime. This makes it necessary to formally recognise the DEOCL list of Explosive Ordnance (which contains over 2400 line items) as explosives authorised under NSW legislation.

2.3 DEOCL List

Accordingly, the DEOCL listing of Explosives Ordnance, (as amended from time to time), is now recognised in NSW as forming part of the List of Authorised Explosives under Clause 8 of the Explosives Regulation 2005.

3 CATEGORIES OF PROHIBITED EXPLOSIVES

The following categories of explosives are prohibited in NSW unless WorkCover has granted an exemption under clause 93 or 94 of the Explosives Regulation 2005 or specific approval given on the appropriate licence or fireworks notification form.

3.1 Safety Cartridges

A safety cartridge or other munitions is prohibited where:

- (a) the bullet is not firmly fixed in the cartridge case, or
- (b) the bullet has a split or cracked case, or
- (c) the bullet has a case that is liable to split or rupture when fired in a properly constructed weapon of a chambering and calibre appropriate to a cartridge of its class, or
- (d) the bullet or other projectile explodes, or contains an incendiary or tracer composition, or contains a lachrymatory, nauseating or toxic substance.

But does not include:

- (e) a safety cartridge in 3.1 (a), (b) and (c) held under a collector's licence issued by the police if the cartridges are kept separate from cartridges for use or for supply.
- (f) safety cartridge for use by the Police Service, the Commonwealth or a State or Territory of the Commonwealth, or by the Armed Services, or
- (g) the importing, with the approval in writing of the Regulatory Authority, of a safety cartridge having a bullet or other projectile that contains an incendiary or tracer composition, or
- (h) a safety cartridge having a bullet or other projectile approved in writing by the Regulatory Authority.

3.2 Fireworks

A firework is prohibited where the firework:

- (a) contains a composition of a chlorate in admixture with sulfur, a sulfide or phosphorus (other than amorces, a streamer cone or a confetti bomb), or
- (b) is of such construction that firework composition can escape from it, or
- (c) can explode en masse, or
- (d) explodes either wholly or in part (other than a distress signal, amorces, a snap for a bon-bon cracker, a streamer cone or a confetti bomb), or
- (e) on ignition may project through the air in an erratic or unpredictable flight, or
- (f) contains arsenic or a compound of arsenic as an ingredient of its composition, or
- (g) does not have displayed on it instructions in the English language relating to the manner in which it should be ignited and the manner in which it is designed to behave, or

- (h) ignites in less than 3 seconds, or more than 15 seconds, after its wick or touch paper has been ignited in accordance with the instructions displayed on it, or
- (i) after having been set up and ignited in accordance with the instructions displayed on it, behaves otherwise than in accordance with those instructions, or
- (j) can be ignited or discharged by means other than the lighting of a wick, touch paper or by electric initiation, other than a distress signal, amorces, snaps for bon-bon crackers, streamer cones, model rocket propellant devices and confetti bombs, or
- (k) is a rocket other than a distress signal, or
- (l) is a trick firework, or
- (m) is a display firework as defined by the Explosives Regulation 2005, or
- (n) is a firecracker that can be initiated by striking on the side of a match-box, or
- (o) are aerial salutes larger than 75 mm.

Notwithstanding the above, fireworks are not prohibited if:

- i. they are for the purpose of use outside the State if they are exported as soon as practicable to that other State or Territory and evidence of an authority to import from that other State or Territory has been received and a copy is forwarded to the NSW Regulatory Authority, prior to the release of the fireworks, or
- ii. they are for use under the authority of a fireworks licence appropriately endorsed for the fireworks allowed to be used and are fireworks other than (b), (e), (i), (j), (k), (n) and (o) and are listed under Section 2 of this document, and
- iii. they are used in accordance with the manufacturer's or supplier's instructions.

3.3 Distress Signals

A distress signal is prohibited if it does not comply with AS 2092 (Pyrotechnic marine distress flares and signals for pleasure craft) or an equivalent International Standards Organisation standard.

3.4 Model Rockets

A model rocket propellant device is prohibited if it:

- (a) contains a composition of a chlorate in admixture with sulfur, a sulfide or phosphorus, or
- (b) is of such construction that ignitable substances can escape from it, or
- (c) may explode either wholly or in part, or
- (d) contains an ignitable substance or ignitable substances exceeding 15 grams in mass, or
- (e) is used for the purpose other than that allowed for by a recognised model rocket club.

But does not include:

- i. a model rocket propellant device containing an ignitable substance or ignitable substances not exceeding 62.5 grams in mass received by a person who is a member of a recognised model rocket club, or
- ii. a model rocket propellant device containing an ignitable substance or ignitable substances
- iii. exceeding 62.5 grams in mass received by a person who is a member of a recognised model rocket club and holds a pyrotechnicians licence endorsed for the use of such devices.

3.5 Liquid Oxygen Explosive Mixtures

A liquid oxygen explosive mixture, which is a mixture of liquid oxygen and a carbonaceous material and is known as a liquid oxygen explosive, is prohibited unless the mixture is created for immediate use as an integral part of a manufacturing process and that process is approved in writing by the Regulatory Authority.

3.6 Unauthorised Explosives

Any explosive that does not appear on the List of Authorised Explosives is a prohibited explosive unless otherwise authorised by WorkCover.
